GREEN FUTURE DAN 1. - PLASTIKA

01. • 220 milijuna tona plastike na svijetu svake godine

02. 6.5 milijuna otpada, odbacuje se u oceane

KOLIKO PLASTIČNOG OTPADA PROIZVODIMO?

03. 1.5 milijuna ptica i morskih sisavaca umire kao rezultat

GREEN FUTURE

01. 50 % zraka kojeg udišemo dolazi iz oceana

02. 70% utječe na klimatsku regulaciju

03. ocean nam donosi hranu i potrebne nutrijente koji dolaze iz njega kao i mnoge medicinske proizvode koji olakšavaju borbu protiv raka, arttritisa, Alzhaheimera

sva plastika na kraju završi u oceanu

KEY STATISTICS

Global Textile Waste

Up to **100 BILLION**
new garments are made each year

The World Produces
92 Million Tons
of textile waste every year

87%
of materials used to make clothing
END UP IN LANDFILL

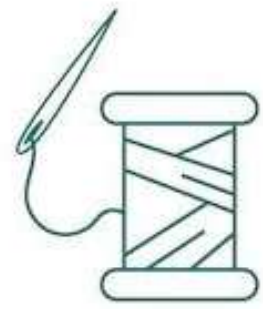

That's one truckload
EVERY SECOND

60%
of all new clothing
contains **PLASTIC**

Textile Production Causes
42 MILLION TONS
of plastic waste per year
9%
of annual non-petroleum
production added to our oceans

1%
of clothing is
RECYCLED INTO NEW GARMENTS

- At the current rate, global clothing sales would reach 160 million tons by 2050.
- We own more clothes than we used to, and we wear them less. Fifteen years ago, our wardrobes were simpler and more sustainable. But today we buy 60% more clothing than before, only to discard each item after wearing it 50% as often.
- On average, every single person in the world uses 11.4 kilograms of clothing every year. This produces the equivalent of 442kg of CO2 emissions per capita.
- Global clothing production doubled between 2000 and 2015 due to increased demand for cheap clothing.
